

DocGenerator

Features and Functionality

Modernize the way your organization creates documents by using DocGenerator. Built on Now, DocGenerator enables document creation using real-time data from anywhere inside the ServiceNow platform to increase productivity and mitigate risk.

Modern Document Creation Made Simple

Easy template creation

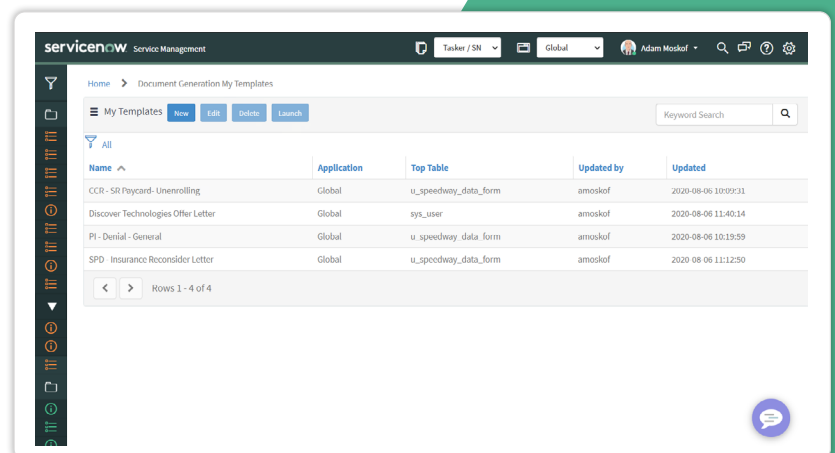

Create Word, PDF, or HTML files with desired formatting. A quick start wizard guides users to identify ServiceNow field names to insert into templates. Also works with any scoped app or custom-built app in the store. Easily preview and test merged templates, then save and publish for use throughout the enterprise.

Automate reports

Generate click-to-fill tables in documents, then create a business rule to run reports automatically.

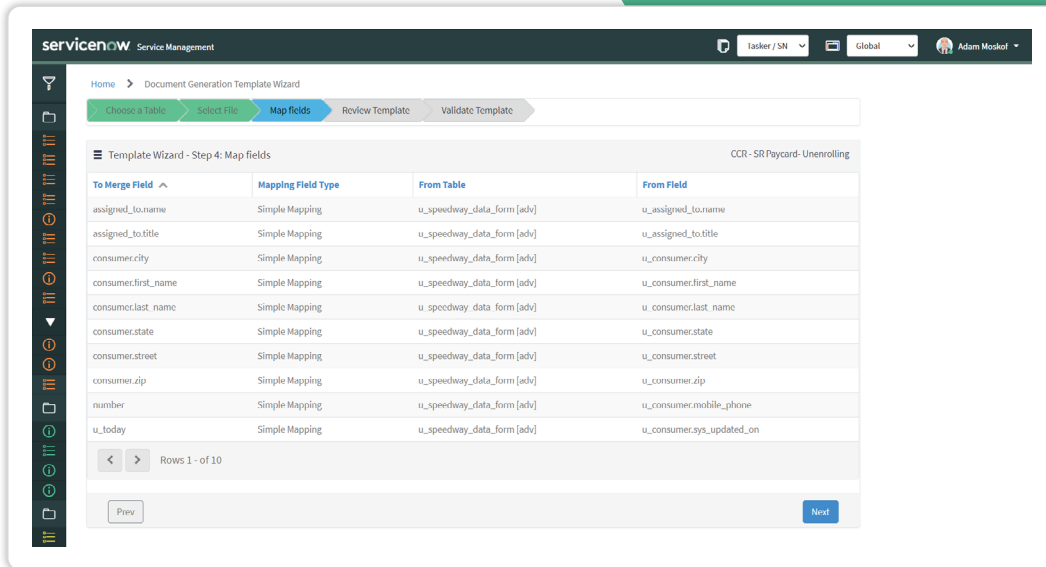

Enable click-to-fill documents

Insert real-time information stored in any ServiceNow table into a document for on-demand use and record the review and approval process.

DocGenerator

FEATURES & FUNCTIONALITY

Built on **now**

Upload and merge library files

Content merge action allows users to click to consolidate and merge ServiceNow data into a file template. File formats available include CSV, PDF, XML, DOC, DOCX, TXT or HTML.

Built on Now platform

DocGenerator leverages ServiceNow to quickly enable enterprise document creation. DocGenerator is certified and available in the ServiceNow App Store for easy and fast configuration and implementation. Deploy via on-premise, hybrid, or cloud environments.
