

# DocIntegrator

## Features and Functionality

DocIntegrator, Built on Now, seamlessly integrates SharePoint with any ServiceNow application. Create, associate, collaborate, review and sign documents inside ServiceNow or Tasker — without ever going into SharePoint.

## Best of Breed Document Management

### Preserves SharePoint security and permissions

Integrates ServiceNow with SharePoint maintaining SharePoint's robust security and permissions. Ensures the right users can access the right libraries and content. Tracks version history, even for new documents created in ServiceNow or Tasker.

### Associate managed content

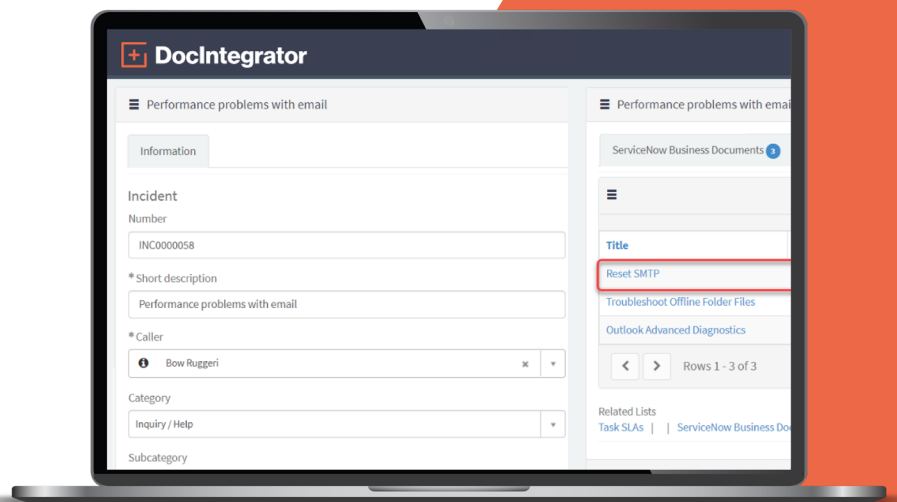

Enables ServiceNow cases, incidents, and tasks to reference managed content in SharePoint.

### Connect documents to any ServiceNow application

Users can connect SharePoint documents to a ServiceNow form, show documents related to items, replace table attachments, create new documents, and save to SharePoint without leaving ServiceNow or Tasker.

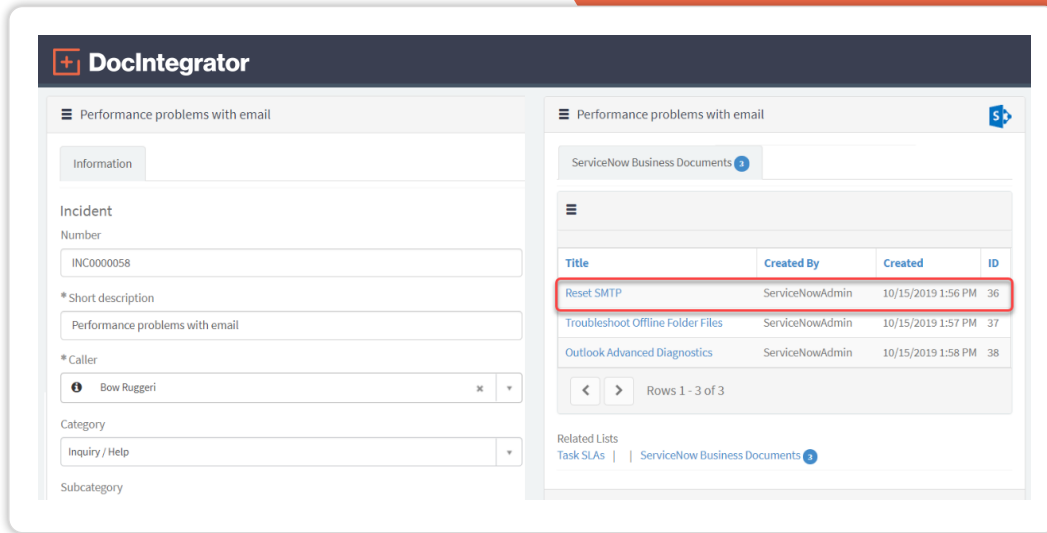

### Real-time document viewing and editing

View and edit SharePoint documents, including metadata, without leaving ServiceNow.

# DocIntegrator

FEATURES & FUNCTIONALITY

Built on  now™

## Robust search capability

Search, view and edit SharePoint metadata within ServiceNow. Find documents quickly using what you know, not constrained by SharePoint folder structures, even across different SharePoint environments. When used with Tasker, attach documents you find directly to a Task.

## Automates document management

Upload, download, or move documents automatically as part of a ServiceNow workflow or process.

## Integrates with Tasker

Quickly see and work on all documents related to a task without going to SharePoint.

## Maintains version control

Uses SharePoint's robust version control to track history. Users can attach restored or previous versions of documents from SharePoint.

## Built on Now platform

Single, secure source of truth for enterprise document management tool. DocIntegrator is certified and available in the ServiceNow App Store for easy and fast configuration and implementation. Deploy via on-premise, hybrid, or cloud environments.
