

DocIntegrator

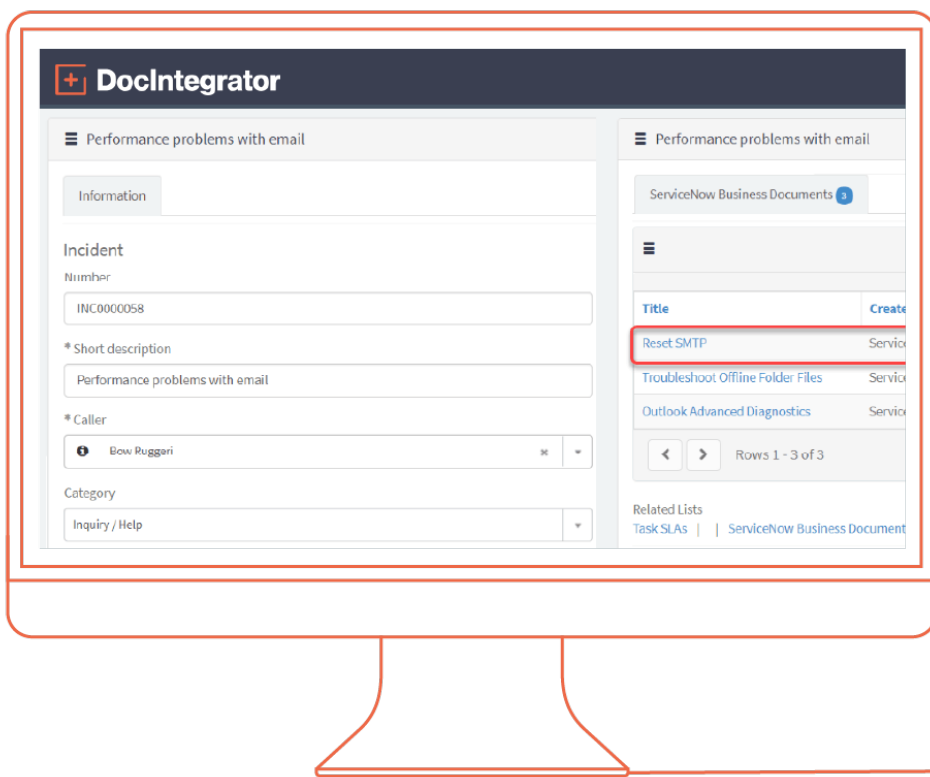

Product Overview

Discover Seamless Document Management

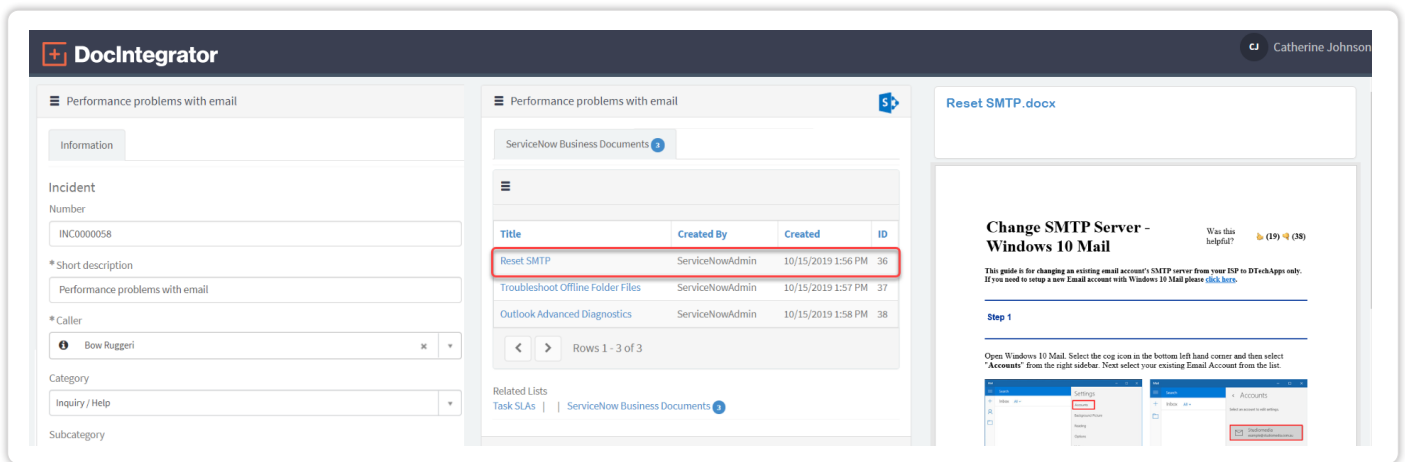

DocIntegrator seamlessly integrates Microsoft SharePoint with any ServiceNow application or Workspace. Create, associate, collaborate, review and sign documents inside ServiceNow or Tasker – without ever going into SharePoint and while maintaining version control and document confidentiality.

Managing documents between applications and outside of ServiceNow is time consuming reducing productivity and increasing the risk of document errors or copies of documents circulating outside of SharePoint. Eliminate these risks and unlock new organizational efficiencies with DocIntegrator.

Built on

Simplify SharePoint Access in ServiceNow

Leverage your ServiceNow investment

Enables easy SharePoint document integration with other ServiceNow enterprise applications so you can manage workstreams and documents in one place. Associate and work with SharePoint documents in any ServiceNow application or Tasker.

Discover increased productivity

Make working with SharePoint documents seamless without ever going to SharePoint.

- Find documents quickly and securely
- See all documents related to ServiceNow applications and tasks
- Edit without downloading and uploading
- Complete actions with a digital signature

Enhance collaboration

Work on documents together in real-time inside ServiceNow or Tasker. Create, edit, review, and approve documents, even those in different SharePoint environments or site collections. Get everyone on the same screen.

Fast Implementation without Coding

Leverage a cost-effective solution more robust than SharePoint Spoke and easier to implement into ServiceNow and SharePoint with DocIntegrator.

Enterprise document management without the cost

When used with any ServiceNow app, everyone with access can manage SharePoint content and documents seamlessly and economically across the enterprise.
